

Democracy and Culture are in Peril: PD Dr. Michael Nehls Warns of the Neuropathologically Induced End of Human Self-Determination | New Book Release on October 24, 2023

In a time of global political radicalization under the pretext of various crises, [Dr. Michael Nehls](#) confronts us with his alarming findings about a silent war against human independent thinking. This is already in full swing and represents the basic prerequisite for the "Great Reset" envisaged by the WEF. This radical, planned transformation of the livelihoods of billions of people, which by 2030 is to include the abolition of privacy and property and the transition to an everyday reality controlled by algorithms, is already having a profound sociopolitical impact today.

Nehls warns: "*We have no choice but to resist this attack by strengthening our resilience to external influences, and time is now of the essence. For behind this global reordering is a much more insidious second reset*". It is aimed at the unnoticed alteration of the human mind itself. In his new book [THE INDOCTRINATED BRAIN](#), Dr. Nehls urgently addresses his readers directly: "*I argue before you as my jury for the existence of a two-stage perfidious master plan of indoctrination, which is being implemented by a small elite without regard for life and limb in full awareness of its implications.*"

In addition to describing exactly how these manipulation techniques work, Nehls points out that "*this program [of indoctrination] was first perfected over centuries purely by trial and error. The U.S. government learned about it in a painful way after the 1950-1953 Korean War, and then, since 2002, it tested it itself on prisoners at Guantánamo Bay [...]. Everything indicates that the knowledge gained from it was applied for the first time and with scientific precision to the entire world population in 2020.*" However, this attack is not over, because it is not limited to the measures taken during the Corona crisis.

In the book, which will be published by Skyhorse Publishing on October 24, 2023, Nehls sheds light on a little-known neurobiological mechanism that is used to control the masses without them being aware of it.

Nehls' message, however, is not only a warning, but also a wake-up call and a guide to self-empowerment. Recognizing this war against the human brain and understanding this mechanism is the key to strengthening mental immunity to these dangerous influences. Understanding this, Nehls makes unmistakably clear, is an urgent necessity to preserve our individual and political freedom and our ability to think critically and independently in these turbulent times. THE INDOCTRINATED BRAIN describes with universal clarity a largely unknown neurobiological mechanism that is being abused in ways as perfidious as they are ingenious for this inhumane indoctrination process. But there is still hope. Knowledge of this mechanism enables us to strengthen our mental immunity against these life-threatening influences. This is now of crucial importance, because it is about our individual freedom and not least about our ability to think for ourselves - a must for everyone who wants to stay sane in these times!

[Michael Nehls, MD](#), is a physician and post-doctoral molecular geneticist. As a basic researcher, he has deciphered the genetic causes of various hereditary diseases, both at German and international research institutions. Two of his discoveries were published in collaboration with several Nobel laureates. The discovery of a key gene in immunity development was honored as a "Pillar of Immunology" by the renowned U.S. Association of Immunology. As a scientific author with a talent for making complex issues understandable to a wide audience, he has written several best-selling books that have been translated into many languages. As a private lecturer, he gives highly popular talks at congresses and universities.
